

Breakthroughs that change patients' lives

Pfizer is a proven leader in developing new medicines for genitourinary (GU) cancers with a longstanding commitment to transforming care and outcomes for people with these pervasive and hard-to-treat cancers.

Our commitment extends to include programs and support for GU cancers

We are proud of our portfolio of **six approved medicines** to treat people living with **prostate, kidney and bladder cancers**, in the United States

Our clinical investments and collaborations in the science of GU cancers have allowed us to gain **deep experience** in understanding the **science of GU cancers**. These ongoing collaborations have allowed us to develop a **robust portfolio and late-stage pipeline**

We work closely with the entire **cancer community** to better understand the **needs of people living with GU cancers**, and their families and caregivers
